

**City of Imlay City**  
**Requests for Proposals and Bids**  
**Water Service Line Physical Verification**

The City of Imlay City is requesting proposals for professional services to physically verify the material type for approximately 146 water service lines. Scope of work and locations are available upon request. The bid shall be a lump sum bid. If you have any questions please contact Ed Priehs, DPW Superintendent at (810) 724-8712. Sealed bids shall be accepted until Tuesday, February 24, 2026 at 3:00 p.m. Sealed bids shall be clearly marked "Water Service Line Physical Verification" and be submitted to City Manager, Craig Horton, 150 North Main Street, Imlay City, MI 48444. The City of Imlay City reserves the right to accept or reject any or all bids, to waive any irregularities and to accept the bid deemed to be in the best interest of the City.

Dawn Sawicki-Franz  
City Clerk

**City of Imlay City**  
**Water Service Line Physical Verification**  
**Scope of Work**

The City of Imlay City is requesting proposals for professional services to physically verify the material type for approximately 146 water service lines. The City will provide a spreadsheet that verifies that each property does not have any conflicts. Specifically, the City will verify that:

1. The curb box is not located in a driveway or sidewalk.
2. The distance the curb box is located from the curb or edge of pavement so a vactor can reach excavation points while staying on the street. To prevent damage to private property, the contractor shall NOT put a vactor on a private driveway. If the weight of a vactor damages a private driveway, the contractor will be responsible for paying the costs of the repair.
3. That there is no custom landscaping (i.e. only turf grass) at the excavation point/s adjacent to the curb stop.

Unless approved by the City, all excavation performed under this contract will be performed using hydro excavation. All work shall be performed Monday through Friday from 7:00 am to 7:00 pm.

The contractor will be responsible for providing and furnishing all necessary labor, tools, equipment, material, and transportation required to:

1. Place door hangers/letters on the doors of homes 1 day prior to excavation to remind the property owner or tenant. The City shall provide the contractor with content to put on the door hangers/letters. The contractor will be responsible for printing and delivering the door hangers/letters.
2. Cut out and peal the sod away from the excavation point/s.
3. Excavate at the curb stop to physically verify the water service line material on both sides of the curb stop.
4. Physically verify and record the following information regarding the water service line on both sides of the curb stop and enter these data points into the spreadsheet provided by the City:
  - Material Type on the Main Side of the Curb Stop
  - Size of the Water Service Line on the Main Side of the Curb Stop
  - Material Type on the Customer Side of the Curb Stop
  - Size of the Water Service Line on the Customer Side of the Curb Stop

The City will provide an electronic and paper/physical spreadsheet that the contractor can use to enter the data points listed above into the respective columns of the spreadsheet. The contractor must provide a complete electronic spreadsheet at the end of the project. The contractor shall always record the actual material observed: lead, copper, plastic, or galvanized. Do NOT use "non-lead."

5. Take two high-resolution pictures for each property:

- Standing near the edge of the street, take a picture that clearly shows if one or two holes were excavated, the obstruction that required two holes (if two holes were excavated) and the home and address number of the home in the background of this picture.
- A picture of the water service line. The water service line must be cleaned off well. The picture must capture the clean water service line in a clear and visible manner on both sides of the curb stop. The water service line must be pictured in a clear and visible manner such that the photo can be used later to verify the data points that the crew records under item 4 above: the material type, and the size of the water service line.

All pictures must be put in digital folders labeled by property address. These photo files shall be provided to the City at the end of the project.

6. Backfilling the excavation holes with sand, compact the sand, and re-placing the sod that was cut out. No holes are to be left open overnight.

Based on the scope of work outlined above, the City's intention is that a two-person crew could perform all the work with one mobilization to each property. One crew member would drive the vactor. A second crew member would drive equipment necessary to the haul sand and equipment for backfilling the excavation point/s.

The City will provide, at NO cost to the contractor, the following supplies, and resources, all of which are located at 641 E. First St., Imlay City, MI 48444:

1. Water from a hydrant to fill hydro excavation equipment;
2. A dump site for material generated from the hydro excavation; and
3. Sand or gravel for backfilling excavation points.
